PROFESSIONAL SUMMARY

Data and Business Intelligence professional with **4+ years of experience** developing data-driven solutions using SQL Server, T-SQL, SSRS and Power BI. Experienced in translating business requirements into reliable reporting and analytics solutions, working with data transformation, data modelling, validation, automation and SQL performance optimisation.

Strong background in developing and supporting operational, financial and performance-focused data solutions, including KPI dashboards, automated reporting, reconciliation processes, invoice and statement reporting, SLA monitoring and service desk analytics.

Experienced in working with stakeholders to understand business requirements, investigate data issues, validate results against source data and improve existing reporting processes. Proven track record of using SQL optimisation and process automation to improve reporting performance, reduce manual effort and increase data accuracy.

CORE TECHNICAL SKILLS

Data & Database Engineering

- SQL Server
- T-SQL
- Stored Procedures
- Views
- Query Optimisation
- Database Performance Tuning
- Data Transformation
- Data Validation
- Data Reconciliation
- Data Modelling
- ETL Concepts
- Relational Database Development

Business Intelligence & Analytics

- Power BI
- SSRS
- KPI Dashboards
- Operational Reporting
- Financial Reporting
- Data Visualisation
- Business & Performance Analytics

Development & Delivery

- Git
- GitHub
- Azure DevOps
- Requirements Analysis

- Solution Development
- Testing & Validation
- Troubleshooting
- Development & Deployment Concepts

Data Engineering Knowledge

- ETL / ELT Concepts
- Data Integration Concepts
- Data Pipeline Concepts
- SQL Server Agent / Job Scheduling Concepts
- Source-to-Target Data Flow
- Data Quality & Reconciliation

Business & Stakeholder Engagement

- Business Requirements Gathering
- Stakeholder Collaboration
- Data Investigation
- Reporting Requirements Analysis
- Process Improvement
- Technical Problem Solving

PROFESSIONAL EXPERIENCE

Business Intelligence Developer / Data Analyst

Inspired Change Solutions | April 2022 – Present

- Design and develop data-driven reporting and analytics solutions using **SQL Server, T-SQL, SSRS and Power BI** to support operational, financial and performance reporting requirements.
- Translate business and stakeholder requirements into scalable reporting solutions, including data queries, stored procedures, report datasets, KPI reporting and dashboards.
- Develop and optimise **T-SQL queries, stored procedures and database views** to improve data retrieval, reporting performance and maintainability.
- Improved SQL query and report execution performance by approximately **30%** through query optimisation, refactoring and performance-focused development.
- Apply data validation and reconciliation techniques to investigate reporting discrepancies, verify results against source data and improve confidence in business-critical information.
- Develop automated reporting processes that reduced **manual reconciliation effort by approximately 70%**, improving operational efficiency and reducing repetitive manual work.
- Enhanced invoice and statement reporting processes, contributing to a **90% reduction in invoicing errors** through improved reporting accuracy and validation.
- Developed technician scheduling and utilisation reporting that reduced manual reporting effort by approximately **75%**, providing improved visibility into operational activity.
- Develop KPI dashboards and reporting solutions supporting **service delivery, utilisation and compliance monitoring**.
- Collaborate with stakeholders to understand business requirements, investigate data-related issues and deliver practical data and reporting solutions.
- Support troubleshooting and continuous improvement of existing reporting solutions by investigating SQL logic, data quality, filtering, joins and reporting behaviour.

SELECTED DATA & ANALYTICS PROJECTS

SLA Monitoring & Compliance Analytics

SQL Server | SSRS | Power BI

- Developed automated SLA compliance reporting to provide visibility into service performance and operational trends.
- Transformed and analysed operational data to support KPI and compliance monitoring.
- Delivered reporting outputs through SSRS and Power BI for business users.

Ticketing & Service Desk Analytics

SQL Server | SSRS | Power BI

- Built reporting solutions to analyse ticket volumes, service trends, turnaround times and service desk performance.
- Developed SQL-based data logic to support operational KPIs and performance analysis.
- Provided business users with improved visibility into service desk activity and performance.

Insurance Bordereaux & Commission Reporting

SQL Server | T-SQL | SSRS

- Developed automated reporting solutions for insurance bordereaux and commission-related processes.
- Used SQL-based data transformation, calculations and validation to support accurate financial reporting.
- Reduced manual reconciliation effort by approximately **70%** through reporting automation.

Invoice & Statement Reporting

SQL Server | T-SQL | SSRS

- Developed and enhanced invoice and statement reporting solutions.
- Applied data validation and reconciliation techniques to improve reporting accuracy.
- Contributed to a **90% reduction in invoicing errors**.

Technician Scheduling & Utilisation Analytics

SQL Server | SSRS

- Developed operational reporting to analyse technician scheduling, utilisation and service activity.
- Improved visibility into operational performance and reduced manual reporting effort by approximately **75%**.

EDUCATION

Higher Certificate in Information Systems

Eduvos

PROFESSIONAL DEVELOPMENT

Make Data-Driven Decisions by Asking Questions

Google / Coursera

Completed March 2025

ADDITIONAL STRENGTHS

- Analytical and structured approach to solving data problems
- Strong SQL and relational database foundation
- Experience translating business requirements into technical solutions
- Focus on data accuracy, validation and reconciliation
- Performance-oriented SQL development
- Experience supporting operational and financial decision-making
- Comfortable working with technical and non-technical stakeholders
- Continuous improvement mindset
